SUGAR LABS TASK FOR CODE IN WITH GOOGLE

—

Sugar Labs Experience

So, recently I was introduced with Code-In with Google, an event by google to introduce new learners to coding and help find new talents. Many organisations and companies came together to help do so. Each company gave tasks to do and I went with Sugar Labs. This is kind of like Scratch without the boring part of making the actual design. They have done it for us.

Maze Activity

Sugar Server includes games and notebooks and other coding activities to help do coding in an easy way. I tried doing a maze puzzle and even though it didn't have coding to be used, I enjoyed it a lot. This was a really good brain teaser and even though this was so simple, I enjoyed playing it.

Dashboard

← GOOGLE CODE IN

It went by pretty smoothly, other than some glitches. The graphics are cheesy, but like they say, 'Appearances can be deceptive', the graphics were, too, as I had a good time.

Activity Log

As I mentioned, there were some glitches and the levels seemed a bit repetitive after some time. Overall, I will rate this game as a 3.8/5.
